

WESSEX ENGINEERING SERVICES
26 JAN 2004

To whom it may concern

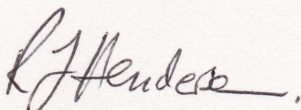

I, Rob Henderson of Wessex Water, attest that Insituform Sewer Services, previously known as Sewer Services Limited, have successfully completed sewer renovation works for us as follows:

Various sewer renovation and tunnel refurbishment works across the Wessex Water region, to a total value of the order of £5.4 million pounds sterling over the period from 1990 to 2002. Sewer and tunnel sizes ranged from 900mm by 750mm to 2.4m by 2.4m. This work included approximately 5 km of man-entry relining using GRP, ferro-cement and IntergROUT techniques in the City of Bristol (acting as Agents to Wessex Water) and included all shaft and access works. No works were subcontracted.

The company has carried out the works in an extremely competent and highly professional manner. In all cases the works were completed to the required timescale and with the highest regard for the health and safety. The company is also to be commended on always ensuring that minimal disruption is caused to local residents, businesses and road-users.

Our repeated use of this company is confirmation of our complete satisfaction with the excellent service they provide.

Signed

Rob Henderson,
Technical Manager, Sewerage Networks

For and on behalf of Wessex Water
